» HELLO

I'm a developer and a designer. There is a great rift in this industry between those two groups. Let me be the first to tell you that this rift doesn't have to exist. My passion for creating beautiful, fully interactive work extends through both sides. I have a strong belief that any boundaries we have are self-imposed, including the claim that "I'm not creative", or "I don't have the patience for code". There is satisfaction to be found in both of these equally-important roles, and I plan on conquering them both.

I am writing this to express my interest for the position of Front End Developer. My 15+ years of experience as a Software Developer with my current and previous employers, have broadened my skills, as well as my knowledge of mobile and responsive design. I've worked and met with clients such as Bank of America, Bridgestone, Red Robin, Deloitte, Facebook, Cisco and Google, just to name a few.

Currently, I help create and maintain a variety of JavaScript components and extensions. Using libraries and extensions such as Backbone and Node.js. Other days, I'm learning new frameworks to help improve our software. In addition, these past years I've had a proven track record helping my team win award winning web and mobile applications in the last 3-4 years.

At the core, I'm an objective oriented programmer. And because of my art background, I'm also detailed orientated. I believe in re-usability and scalability, with a strongly typed language. I'm an advocate for organized and commented code, highly motivated to learn and work well under many pressured situations.

My keen attention to detail and dedication to solving any problem, is what I believe separates me from other candidates. I would love to schedule an interview at your earliest convenience.

Sincerely,
Rafael Alvarado Emmanuelli
